DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 15-28, drawn to a particle blast apparatus, classified in class 451, subclass 99.
 - II. Claim 29, drawn to a method of imparting energy to a hopper, classified in class 451, subclass 38.
 - III. Claims 30-36, drawn to a method of flowing cryogenic particles from a hopper, classified in class 451, subclass 39.
 - IV. Claims 37 and 38, drawn to another method of flowing cryogenic particles, classified in class 451, subclass 39

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II, III or IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process for using the product as claimed can be practiced with another materially different product, i.e. the process can be practiced with a hopper that has the energy imparting device attached to the hopper, either directly or indirectly, but not carried by the hopper,

Art Unit: 3723

such as a vibrating motor or impulse assembly mounted on a frame and attached to the hopper.

3. Inventions II, III, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different effects, i.e. invention II is directed to a method of imparting energy to a hopper of a particle blast apparatus, whereas, inventions III or IV are directed to a method of flowing cryogenic particles from a hopper, and the three particular methods require different modes of operation, respectively, as they each require different steps, wherein the steps as claimed do not overlap.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 (a) of the other invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
